AIIMS Patna Sarthi

Hospital navigation & OPD companion app for patients

136 screens | 4 languages | Works offline | Free

Prototype — sample data only

What the app does — one glance

- **OPD token & live queue** — Token number, people ahead, estimated wait time
- **Indoor navigation** — Floor plan, QR points and GPS — turn-by-turn
- **Tests & lab token** — Choose tests, find the right lab counter
- **Reports** — Read your lab report, track report status
- **Payment & receipt** — See charges, pay, get a receipt
- **Emergency** — One-tap call to 108 · emergency registration
- **Appointments** — Book, reschedule, follow-up reminders
- **Accessible for all** — Large text, dark mode, voice guidance
- **4 languages** — Hindi, English, Bhojpuri, Maithili
- **AI Doctor** — General health guidance — not a diagnosis
- **AI prescription reader** — Reads a prescription photo, explains medicines simply
- **Staff dashboard** — Counters, queue and live crowd for hospital staff
- **Works offline** — Opens once with internet, then works without it

Who it helps

- **Patients** — Find the way, get a token, see reports
- **Family / attendants** — Share live visit status
- **Hospital staff** — Counter queue and crowd view
- **Doctors & labs** — Less time on directions, more on care

AI module — what it does

1. AI Doctor

- Patient types the problem (fever, cough, pain)
- App gives **general health information only**
- Every answer shows: “This is general information, not a diagnosis. Please consult a doctor.”

2. AI prescription reader

- Reads the medicine names from a photo of a prescription
- Explains each medicine in **simple language**
- Does not change, add or prescribe any medicine

What the AI does NOT do: it does not diagnose any disease · does not recommend or prescribe treatment or medicines · does not control or influence any medical device · does not monitor or predict any condition.

Status: This is a working prototype with sample data only — no real patient data is collected, there is no server, and there are no real payments. For regulatory purposes, the app is intended for patient navigation and OPD workflow only — not for the diagnosis, prevention, monitoring or treatment of any disease.
