AIIMS Patna Sarthi

Hospital navigation and OPD companion app for patients

Web app · Hindi, English, Bhojpuri, Maithili · Works offline after the first open

What this app does

It helps a patient get from the hospital gate to the doctor and back — so they do not lose hours searching for a department, a token, a test or a report.

- OPD token and live queue
- Department navigation (floor plan, QR, GPS)
- Tests and reports
- Payment and receipt
- Emergency — one-tap call to 108
- Appointments and follow-up
- Large text, dark mode, voice help
- 4 languages

AI module — what it does

- **AI Doctor:** the patient types their problem (fever, cough, pain) — the app gives **general health information only**.
- **AI prescription reader:** reads the medicine names from a photo of a prescription and **explains them in simple language**.
- Every answer carries a clear line on screen: *"This is general information, not a diagnosis. Please consult a doctor."*

What these AI parts do NOT do (stated explicitly):

- They do **not diagnose** any disease.
- They do **not recommend treatment or medicines** and do **not prescribe**.
- They do **not control or influence any medical device**.
- They do **not monitor or predict** any disease or condition.

Regulatory position — for CDSCO

Intended Use statement: "This app is intended for patient navigation and OPD workflow. It is not intended for the diagnosis, prevention, monitoring or treatment of any disease, and it does not replace a doctor."

- This app is **not** a drug, vaccine, blood product or medical device.
- It does **not** control or influence any medical device.
- The AI parts provide general information only — they do not diagnose or treat.
- We seek CDSCO's guidance on the correct classification for this app.

Status: This is a prototype (demo) with sample data only. No real patient data is collected, there is no server, and there are no real payments.
